

ZERO BONE LOSS™ LAB

"Quality & Precision Above Else"

Welcome to Zero Bone Loss™ Lab, where quality meets perfection!

At Zero Bone Loss™ Lab, we value open and direct communication in order to thrive. The relationship between dental laboratories and dentists are no different. In order to achieve the best results for your patients' cases, an open line of communication with your dental lab is of the utmost importance.

***We are EXPERTS in restoring implants following Doctor Tomas Linkevicius
Zero Bone Loss™ philosophy***

- Every submitted case is reviewed and supervised by a Zero Bone Loss Concepts Expert Doctor that will approve technician designs and perform quality assessments before delivery of every final prosthesis.
- Our experts provide selection of optimum Titanium Base height in order to establish proper emergence profile with both tissue and bone in mind. This provides the proper dimension for mucointegration.
- Every manufactured final prosthesis will have a final X-ray verifying adequate seating and will include articulated models with gingiva and model analogs.
- We only use original parts and include a brand-new screw with every prosthesis.
- We follow Doctor Linkevicius recommendation for polishing Zirconia in order to promote optimal tissue adhesion and limit the glazing of the prosthesis to the supragingival area only.
- We kindly request that you submit an X-ray of a fully seated scan post, along with tissue height measurements for every case in order to provide you with the best possible outcome.
- Our doctors will be available to answer any questions you might have.
- Our laboratory is FULLY DIGITAL & we do not accept PVS impressions.

WE ACCEPT ALL INTRAORAL SCANS
